EDUCATION

Btech CSE, Bennett University

Aug 2024 — Present

PROJECTS

Hostel Desk

Tech Stack:

Next.js, AWS Lambda, DynamoDB, SNS, Cognito, Amplify

- Developed a cloud-native hostel management system using Next.js and AWS services for scalability and performance.
- Implemented serverless backend using AWS Lambda, enabling efficient and cost-effective request handling.
- Designed and managed NoSQL database architecture using DynamoDB for fast and reliable data storage.
- Integrated AWS Cognito for secure authentication and role-based access control.
- Enabled real-time notifications using AWS SNS for updates on requests and system activities.
- Deployed the application using AWS Amplify, ensuring seamless CI/CD and hosting.
- Built a responsive and user-friendly frontend with Next.js for improved user experience.

Ride Share

Tech Stack:

Next.js, Supabase

- Developed a ride-sharing application to connect users with drivers for efficient and cost-effective transportation.
- Implemented real-time ride booking, driver matching, and location tracking features.
- Designed an intuitive and responsive user interface for seamless user experience.
- Built backend services for ride management, route optimization, and fare estimation.
- Integrated secure authentication and database management for storing user and ride data.
